

Argentina

Annual Observance Report of the Special Data Dissemination Standard for 2006

I. INTRODUCTION

The IMF's work on data dissemination standards began in October 1995, when the Interim Committee (now the International Monetary and Financial Committee) endorsed the establishment by the IMF of standards to guide members in the dissemination to the public of their economic and financial data. The standards were to consist of two tiers: the Special Data Dissemination Standard (SDDS) to guide countries that have, or that might seek, access to international capital markets, and the General Data Dissemination System (GDDS) to assist all other member countries. The IMF Executive Board approved the SDDS in March 1996, and has since conducted periodic reviews of the SDDS, making changes to maintain relevance as developments warrant. The Executive Board authorized annual reports of subscribers' observance of their SDDS undertakings in March 1999 after the Second Review of the Special Data Dissemination Standard, which also implemented a new requirement that subscribing countries disseminate a data template on international reserves and foreign currency liquidity.

This observance report is in three additional parts. Part II summarizes a subscriber's SDDS undertakings. Part III reviews the subscribing country's observance of SDDS requirements during the reference year, and Part IV provides information, as available, on the quality of the subscriber's statistical processes for compiling and disseminating the data.

II. SDDS UNDERTAKINGS

In subscribing to the SDDS, countries undertake several measures to document their data dissemination practices to the international public. This report covers observance of SDDS undertakings. It follows the legal text governing the SDDS, contained in the Annex to the text of the founding 1996 Executive Board decision.¹ The Annex refers to the four metadata dimensions (Data, Access by the Public, Integrity, and Quality) of the SDDS and to the Dissemination Standards Bulletin Board (DSBB):

- Under the **Data** dimension (Sections II.1 and III.3 of the Annex):
 - **Coverage:** Subject to the applicable "as relevant" coverage flexibility options allowed by the SDDS and exercised by the subscriber, subscribers must disseminate to the public all prescribed components of all prescribed data

¹ Posted on the internet at <http://www.imf.org/external/pubs/ft/sd/index.asp?decision=EBM/96/36>.

categories.² The report takes special note of the subscriber’s coverage of the prescribed components for the data template on international reserves and foreign currency liquidity (reserves template) and for external debt.

- **Periodicity:** Subject to the periodicity flexibility options allowed by the SDDS and exercised by the subscriber, subscribers must release all prescribed components of all prescribed data categories with at least the prescribed periodicity. The report takes special note of the subscriber’s observance of the periodicity requirements for the reserves template and for external debt.
- **Timeliness:** Subject to the timeliness flexibility options allowed by the SDDS and exercised by the subscriber, subscribers must release all prescribed components of all prescribed data categories with at least the prescribed timeliness. The report takes special note of the subscriber’s observance of the timeliness requirements for the reserves template and for external debt.
 - *All timeliness information in this report is based on release dates detected from the national summary data page (see below) the subscriber maintains.*
- Under the **Access by the Public** dimension (Sections II.2 and III.3 of the Annex):
 - **Advance release calendar (ARC):** Subscribers must disseminate an ARC for all prescribed components of all prescribed data categories (subject to the “as relevant” coverage flexibility options allowed by the SDDS and exercised by the subscriber, and data released with daily frequency), whether or not periodicity or timeliness flexibility options are taken, at least three months in advance of release.

² “As relevant” coverage flexibility may be available to a subscriber, subject to IMF staff approval, for components of the following categories:

Production index: Breakdowns by industrial, primary commodity, or sector, as relevant.

Labor market: Employment, unemployment, and wages/earnings, as relevant.

Central government debt: Breakdowns by domestic and foreign holders, as relevant, with a breakdown by currency (including indexed), as relevant, and a breakdown by maturity; debt guaranteed by central government, as relevant.

Stock market: Share price index, as relevant.

Exchange rates: Spot rates and 3- and 6-month forward market rates, as relevant.

- ARCs are to be reported to the IMF covering a future period from three months to one year, with a frequency sufficient to provide release dates at least three calendar months in advance of the current date.
- ARCs may be revised after dissemination but should provide the date of release no later than the Friday preceding the day of release.³
- ARCs must be reported in an electronic format the IMF determines.
- This report refers to timeliness against the ARC as “punctuality” to distinguish it from timeliness against SDDS requirements.
 - *All punctuality information in this report is based on release dates detected from the national summary data page (see below) the subscriber maintains and the ARC the subscriber reports to the IMF.*
- Under the **DSBB** (Section III.2 of the Annex):
 - **National summary data page (NSDP):** Subscribers must post a table on a national webpage to which the DSBB is linked containing for all prescribed components of all prescribed data categories (subject to coverage flexibility options allowed by the SDDS and exercised by the subscriber) the reference period of the latest release and the value of the latest and most recent previous releases.
 - NSDPs must follow format and layout requirements determined by the IMF that allow the staff to detect releases by electronically scanning the NSDP.
 - Among these electronic monitoring requirements, for the prescribed data template on international reserves and foreign currency liquidity, as well as the table on external debt, the NSDP may link to another electronic document containing a table with the prescribed components; however, the NSDP must contain the reference period of the table that contains the current release and is the target of such a link.

³ “Date” in this sentence refers to a specific day. Subscribers may initially enter “no later than” (NLT) dates into an ARC. This text states that NLT dates must be set to specific dates by the Friday preceding the day of release.

- Under **metadata** (Section III.3 of the Annex):
 - **Metadata certification:** Every calendar quarter, subscribers must certify that the information posted on the DSBB is correct within three (local and IMF) working days after the end of the quarter, and update metadata the subscriber deems incorrect at the certification time within an additional five (local and IMF) working days of the end of the quarter. The metadata posted on the DSBB include
 - The ARC.
 - Descriptions of compilation and dissemination practices for the Data, Access by the Public, Integrity, and Quality dimensions, as well as the six aspect Summary Methodology, for each data category the SDDS prescribes, subject to any “as relevant” coverage flexibility options allowed by the SDDS and exercised by the subscriber.
 - User contact and data release formats information.

In making an overall assessment whether a subscriber is in observance of the SDDS, staff will follow a graduated approach that distinguishes between minor and serious deviations from a subscriber’s SDDS undertakings.

III. OBSERVANCE OF THE SDDS BY ARGENTINA DURING 2006

Argentina subscribed to the SDDS on August 16, 1996 and met all SDDS requirements on November 1, 1999. The Summary of Observance table⁴ on the DSBB shows Argentina’s dissemination policy concerning periodicity and timeliness of SDDS prescribed data categories and their components, as well as the flexibility options allowed under the SDDS that it has exercised, if any. According to the Summary of Observance, these policies have been in observance of the SDDS since November 1, 1999.

A. Data Dimension Undertakings

Coverage

Argentina met the SDDS requirements for coverage for all data categories. As shown on the Summary of Observance at <http://dsbb.imf.org/Applications/web/sddscategorylist/?strcode=ARG>, Argentina is using an

⁴ <http://dsbb.imf.org/Applications/web/sddscategorylist/?strcode=ARG>.

“as relevant” coverage flexibility option for the exchange rates because there is no forward exchange market of significance.

Reserves template

Argentina disseminates all prescribed components for the reserves template.

External debt

Argentina disseminates all prescribed components for the external debt.

Periodicity

Argentina met the SDDS requirements for periodicity for all data categories.

Argentina exceeded the SDDS periodicity requirements for

Central bank survey
Official reserve assets.

Reserves template

Argentina met the SDDS monthly periodicity requirement for this data category.

External debt

Argentina met the SDDS quarterly periodicity requirement for this data category.

Timeliness

Table 1 shows for each prescribed data category how well Argentina met the SDDS requirement for timeliness. To provide context, the table also shows the disseminated periodicity and indicates whether it exceeds the SDDS requirement.

As shown on the Summary of Observance at <http://dsbb.imf.org/Applications/web/sddsctycatsoolist/?strcode=ARG>, Argentina is using the following flexibility options:

- For the timeliness of the data on general government operations; and
- For the timeliness of the data on the depository corporations survey due to its extensive banking system.

Argentina met the timeliness requirements during 2006 for some of the data categories except with: short delay for December production index; long occasional delays for official reserve assets; and long frequent delays for central government operations and central government debt. Data were not disseminated for the following: (i) January, August, and September central government operations, and (ii) fourth quarter central government debt. Timeliness delays and non-dissemination of fiscal sector data were frequent.

Argentina exceeded the SDDS timeliness requirements for⁵

National accounts
 Production index
 Employment
 Unemployment
 Consumer price index
 Producer price index
 Central bank survey
 Merchandise trade
 International investment position.

Reserves template

Argentina met the timeliness requirements during 2006 for some months except for some frequent long delays, falling short of the SDDS one month timeliness requirement for this category.

⁵ Exceeded means that Argentina announced a dissemination lag that was better (shorter) than the one prescribed by the SDDS.

External debt

Argentina met the timeliness requirements during 2006 for some quarters, except for the second quarter (long delay) and the third quarter (short delay), falling short of the SDDS one quarter timeliness requirement for this category.

B. Access Dimension Undertakings**Advance Release Calendar**

Argentina provided an ARC for 12 months of 2006. Update of the ARC has been timely for releases.

Punctuality

Table 2 shows for each prescribed data category how well Argentina met the SDDS requirements for punctuality against its ARC. To provide context, the table also shows the disseminated periodicity and indicates whether it exceeds the SDDS requirement. The table also shows Argentina's policy on release lags for each data category, as shown in its SDDS metadata.

Argentina disseminated punctually during 2006 for some data categories except with: occasional short delay for labor market and balance of payments; long delay for December production index, November central bank survey, and May and November official reserve assets; and long frequent delays for central government operations, central government debt, depository corporation survey, reserve template, merchandise trade, and external debt. Data has not yet been disseminated for the following: (i) 2005 general government operations, and (ii) fourth quarter central government debt. Data were not disseminated for January, August, and September central government operations.

C. DSBB Undertakings**National summary data page**

Argentina displays the SDDS-prescribed components on its NSDP with the exception of some components of the financing of the general and central government operations. Updates of the NSDP during 2006 usually have been timely for all data categories except for a few occasions. Argentina posts on the NSDP the reference period of linked tables such as the Data Template on International Reserves and Foreign Currency Liquidity, External Debt, and International Investment Position, facilitating electronic detection of these releases.

D. Metadata Undertakings

Metadata certification

Table 3 shows for each prescribed data category how well Argentina met the SDDS timeliness requirements for quarterly certification of its metadata on the DSBB. The table also shows the timeliness of metadata updates if, at the time of quarterly certification, Argentina informed the staff the metadata posted on the DSBB were incorrect.⁶

Argentina certified accuracy of metadata during 2006 for most categories except for the fourth quarter metadata that had 27 days delay, falling short of the SDDS timeliness requirements.

IV. DATA QUALITY

An assessment of data quality provides a context within which to judge the monitored coverage, periodicity, timeliness, and metadata certification of the SDDS. Some subscribers, for example, may exceed the SDDS requirements for the comprehensiveness with which their statistics include all units in the economy whose activities are relevant for certain data categories. Others may exceed the SDDS requirements for periodicity and timeliness. Some countries may produce especially comprehensive and well-stated information about their data (metadata).

Argentina has not yet received a mission to produce a data module of the Reports on Observance of Standards and Codes (data ROSC) through which the IMF assesses in detail the quality of the statistical systems of its member countries.

The statistical appendix of the 2006 Article IV staff report concluded in July 2006 (<http://www.imf.org/external/np/sec/pn/2006/pn0693.htm>) stated that:

“While data provision for surveillance purposes is broadly adequate, staff analysis was hampered by shortcomings in the timelines of provision of fiscal data for the provincial governments.”

⁶ The SDDS requires (<http://www.imf.org/external/pubs/ft/sd/index.asp?decision=EBM/96/36>, section III.3) that

... subscribers will notify the IMF's staff, within three working days of the end of each calendar quarter, that either: (1) all of the metadata posted on the DSBB are fully accurate; or (2) certain metadata are inaccurate. In the latter case, subscribers would need to provide the corrected metadata within a further five working days.

Table 1. Argentina, 2006: Timeliness Against SDDS Requirements

Unshaded cells reflect SDDS prescribed periodicity; entries in shaded cells reflect cases where SDDS prescribed periodicity is exceeded or where flexibility options are used.

√ – SDDS requirement met; × – data were not disseminated and/or no ARC release dates provided; negative numeric entry – number of days dissemination was later than timeliness requirement.
